

RIGHTS NOT PRIVILEGES IN MEXICO FOR DEAF CHILDRENS USERS OF COCHLEAR IMPLANTS

Teresa Escorza Chávez 18/abril /2022

CIICA EN VIVO: LAS BARRERAS GLOBALES A LA CI PARA NIÑOS

¿Cuáles son las barreras globales para la CI en los niños y para los servicios que requieren? Miembros de CIICA de todo el mundo compartirán sus barreras y cómo las abordan. ¿Cuáles piensan los padres y los jóvenes que son las barreras? ¿Qué hacen con ellos?

STIGMA

IF YOU WERE TO HAVE A BABY AND HIS
HEARING SCREENING REVEALED THAT HE WAS
DEAF, WOULD YOU KNOW WHAT TO DO?

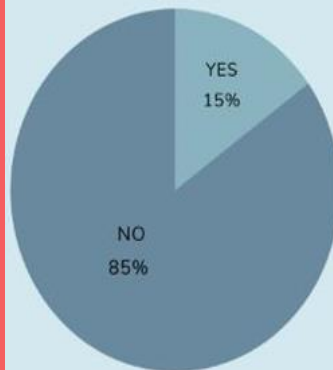

Most relatives of newborns with hearing loss do not know how to act.

It is necessary to follow up the cases to achieve timely diagnosis and intervention.

DO YOU THINK THAT THE HEALTH SYSTEM
GUARANTEES QUALITY OF LIFE FOR PEOPLE
WITH HEARING DISABILITIES?

The social perception of the Mexican health sector in terms of hearing impairment tends to be negative.

Institutions and authorities must create public policies that are aimed at closing gaps.

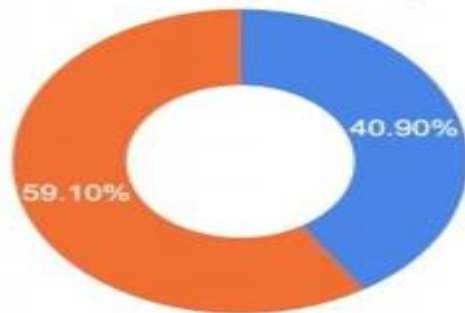

SCORZA ICJ A.C.

Importance of hearing screening.

The person took a hearing screening?

● YES
● NO

A survey was made to relatives of persons with hearing disability, surprisingly more than 50% of them never took a screening test to detect their disability.

A late detection of hearing disabilities can bring serious consequences. This is because oral and written communication skills cannot be adequately developed[1].

In the long run, this will affect in his/her learning process. This difficulties increase when this persons face social, cultural and intellectual exclusion. Also they can find problems while working[1].

Diagnosis and Technology

Degree of hearing loss

Most hearing impaired people have profound hearing loss and it is of the sensorineural type. This means that the person does not hear any speech and can only hear some very loud sounds.

Hearing Technology

Most hearing impaired people start with a hearing aid and then switch to a cochlear implant, mostly through the Seguro Popular, which costs 300,000 to 400,000 pesos.

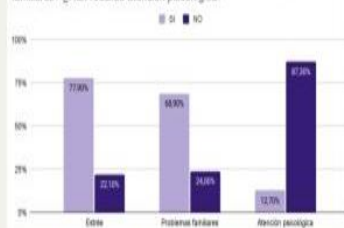

Device upgrades

Most people after acquiring any type of hearing technology have not been able to update it over the years, and only a few have done it only once due to economic issues and lack of resources.

Importance of going to psychological attention for families that take care of a person with hearing disability.

¿Crees que tu familiar con discapacidad influye en el estrés y/o problemas familiares? ¿Han recibido atención psicológica?

In a survey done to **647 relatives** of persons with hearing disability, a high percentage of them believe that the person increases the stress of the family and also contributes with many of the family problems. However **only 12.7%** of this families **go to psychological care**.

Stress levels in families **increase** mainly due to thoughts of possible **social criticism, economic problems** or the **responsibilities** that taking care of the person imply.[1,2]

It is **important** to look for **professional help** in order to **manage emotions** and **solve problems** adequately.[2]

Professional help gives **tools** for families to **communicate adequately, valuing and respecting** the person with hearing disability allowing to reduce the barrier of communication the disability produces.[2]

Psychological services in Mexico

DIF - EDOMEX

• Monday to Friday from 9:00 to 20:00.

3.

Educational Care

In this next part we will show you a couple requirements needed for the optimal development of hearing impaired students

Inside the classrooms:

- Be mindful of the acoustical conditions of the room
- Every didactical unit must be accompanied by suitable complementary material
- Teach all the required information using visual media

Specialized Education

- Training in reading in reading facial expressions as well as lips
- Training in the usage of cued speech
- Training and guidance for teachers in the process of adapting the curriculum and strategies for communication and interaction

Now that you know a little more about what is needed in schools, ask yourself if the educational institutions you know have them and in the case they don't try to point this out to corresponding authorities. If all of all cared about demanding progress from organizations then someday students with different necessities will receive the high end education they deserve

Data obtained by a survey conducted by Sorza ICJ s.c. to families with a hearing impaired member

Inclusive education

The majority of us have had experiences with the educational system, whether they are bad or good is another story, however not all of us have once thought about people who are different from us. Taking that into consideration now we will present you with information that will help you grasp a better understanding of hearing impaired people, as well as their experiences regarding the school system.

1.

Educational Centre

Based on a survey made by the organization to hearing impaired people and/or their families, approximately 69% of the responses said that they or their children went to a regular school while 15.6% are homeschooled.

2.

Insight Perspective

Despite educational institutions ensuring parents that their children are being well taken care of, even more so those with disabilities, parents can not help but feel anxious. The survey in question revealed that 37.6% of the parents interviewed feel uncertain of whether the schools are treated with respect or not, at the same time 28.3% feel unhappy with the treatment.

OUR GOAL

URGENT Guarantee the hearing health of children like Paola, helping us to have their updates, and everything that they need to universal health in hearing

Scorza ICj a.c.

This is a simple and fast procedure that allows doctors to identify infants who are susceptible to hearing loss

Its objective is to guarantee integral attention for newborn babies in order to diminish the prevalence of hearing loss in the child population and to contribute to rehabilitation.

Did you know what a neonatal hearing screening is?

¡MUCHAS GRACIAS!
